FOR IMMEDIATE RELEASE

Cardholder Data Secure with QuikServe Solutions

Company completes PCI evaluation for card data security

Omaha, NEB - QuikServe Solutions has successfully completed the Payment Card Industry (PCI) evaluation for payment card data security. Successful completion of the PCI evaluation is testament that the independent software vendor's (ISV) hardware and software meet the PCI Data Security Standard (DSS) set by the PCI Security Standards Council.

The PCI-DSS, endorsed by American Express, Discover Financial Services, Visa Inc., MasterCard Worldwide and JCB International, requires merchants and service providers that store, process or transmit customer payment card data to adhere to information security controls and processes that ensure data integrity. The evaluation is an independent, third-party assessment by a Qualified Security Assessor (QSA) who is trained to make these evaluations according to the PCI Security Standards Council. The QSA files a Report on Validation (ROV) on behalf of QuikServe Solutions stating that the company is in compliance with PCI security standards. The ROV is then reviewed and approved by the Security Standards Council.

QuikServe Solutions maintains a Payment Application Data Security Standard (PA-DSS) validation; a program that includes requirements for encryption and storing of cardholder data by payment applications, such as point of sale (POS) systems sold and supported by QuikServe Solutions. The PA-DSS is just one part of the PCI-DSS requirements, which differ based on a merchant's classification and is influenced by a merchant's annual volume of transactions per card type.

"We take the security of our systems very seriously," says Kevin Simmonds, President of QuikServe Solutions. "Today, when theft of consumer information is happening with surprising frequency, we owe it to our customers, and to their customers, to make sure we meet the highest standards for data security." Regular completion of the PCI evaluation ensures merchants' systems keep up with evolving technology threats and keep customer cardholder data safe.

More information on the PCI Data Security Standard can be found at www.pcisecuritystandards.org.
